Installation, Storage, and Compute with Windows Server 2016

Exam A

QUESTION 1
Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the

series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a dynamically expanding virtual hard disk (VHD) file that is 900 GB. The VHD contains 400 GB of free space.

You need to reduce the amount of disk space used by the VHD.

What should you run?

A. the **Mount-VHD** cmdlet

B. the **Diskpart** command

C. the **Set-VHD** cmdlet

D. the **Set-VM** cmdlet

E. the **Set-VMHost** cmdlet

F. the **Set-VMProcessor** cmdlet

G. the **Install-WindowsFeature** cmdlet

H. the **Optimize-VHD** cmdlet

Correct Answer: H
Section: (none)

QUESTION 2
Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 contains a virtual machine named VM1.

You need to ensure that you can use nested virtualization on VM1.

What should you run on Server1?

A. the **Mount-VHD** cmdlet
B. the **Diskpart** command
C. the **Set-VHD** cmdlet
D. the **Set-VM** cmdlet
E. the **Set-VMHost** cmdlet
F. the **Set-VMProcessor** cmdlet
G. the **Install-WindowsFeature** cmdlet
H. the **Optimize-VHD** cmdlet

Correct Answer: F

QUESTION 3
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:
- Deploy a failover cluster to two new virtual machines.
- Store all application databases by using Encrypted File System (EFS).

- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.
- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.

- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

You need to modify the Hyper-V cluster to meet the load balancing requirement for the virtual machine.

Which command should you run?

A. **(Get-ClusterParameter).AutoBalancerMode=2**

B. **(Get-Cluster).AutoBalancerMode=2**

C. **(Get-ClusterParameter).AutoBalancerLevel=2**

D. **(Get-Cluster).AutoBalancerLevel=2**

Correct Answer: D

QUESTION 4
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

A company named Contoso, Ltd. has several servers that run Windows Server 2016. Contoso has a Hyper-V environment that uses failover clustering and Windows Server Update Services (WSUS). The environment contains several Windows containers and several virtual machines.

The WSUS deployment contains one upstream server that is located on the company's perimeter network and several downstream servers located on the internal network. A firewall separates the upstream server from the downstream servers.

You plan to deploy a human resources application to a new server named HRServer5. HRServer5 contains a FAT32-formatted data volume.

The CIO of Contoso identifies the following requirements for the company's IT department:
- Deploy a failover cluster to two new virtual machines.
- Store all application databases by using Encrypted File System (EFS).
- Ensure that each Windows container has a dedicated IP address assigned by a DHCP server.
- Produce a report that lists the processor time used by all of the processes on a server named Server1 for five hours.
- Encrypt all communication between the internal network and the perimeter network, including all WSUS communications.
- Automatically load balance the virtual machines hosted in the Hyper-V cluster when processor utilization exceeds 70 percent.

What should you do to prepare the data volume on HRServer5 to store the databases required for the human resources application?

A. Format the data volume by using ReFS.
B. Enable Trusted Platform Module (TPM) on HRServer5.
C. Format the data volume by using NTFS.
D. Enable BitLocker Drive Encryption (BitLocker) on the data volume.

Correct Answer: C

QUESTION 5
Your network contains a new Active Directory domain named contoso.com.

You have a security policy that states that new servers should run Nano Server whenever possible.

Which server role can be deployed on a Nano Server?

A. Active Directory Domain Services
B. DHCP Server
C. Network Policy and Access Services
D. Web Server (IIS)

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 6
You have a server named Server1 that runs Windows Server 2016.

The Windows Server 2016 installation media is mounted as drive D.

You copy the NanoServerImageGenerator folder from the D:\NanoServer folder to the C:\NanoServer folder.

You need to create a custom Nano Server image that includes the Hyper-V server role. The image will be used to deploy Nano Servers to physical servers.

Which two commands should you run? Each correct answer presents part of the solution.

A. **New-NanoServerImage –Edition Standard –DeploymentType Guest –MediaPath D:\ -TargetPath .\NanoServerImage\NanoServer.wim –Compute**

B. **Install-PackageProvider NanoServerPackage**

C. **Import-PackageProvider NanoServerPackage**

D. **New-NanoServerImage –Edition Standard –DeploymentType Host –MediaPath D:\ -TargetPath .\NanoServerImage\NanoServer.wim –Compute**

E. **Import-Module C:\NanoServer\NanoServerImageGenerator**

Correct Answer: DE

QUESTION 8
You have a server named Server1 that runs Windows Server 2016.

Server1 has Internet connectivity.

You have a Nano Server image.

You need to download and save a Nano Server package in the Nano Server image. The package is NOT included in the Windows Server 2016 installation media.

Which two cmdlets should you run on Server1? Each correct answer presents part of the solution.

A. **Set-PackageSource**
B. **Install-PackageProvider**
C. **Add-AppxProvisionedPackage**
D. **Save-NanoServerPackage**
E. **Add-WindowsPackage**

Correct Answer: BD
Section: (none)

QUESTION 9
You have a server named Server1 that runs Windows Server 2016 and has the Hyper-V server role installed.

On server1, you plan to create a virtual machine named VM1.

You need to ensure that you can start VM1 from the network.

What are two possible ways to achieve the goal? Each correct answer presents a complete solution.

A. Create a generation 2 virtual machine.
B. Create a generation 1 virtual machine and run the **Enable-NetAdapterPackageDirectcmdlet**.
C. Create a generation 1 virtual machine that has a legacy network adapter.

D. Create a generation 1 virtual machine and configure a single root I/O virtualization (SRV-IO) interface for the network adapter.

Correct Answer: AC

QUESTION 11
You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has two virtual machines named VM1 and VM2.

You discover that VM1 and VM2 can communicate with Server1 over the network.

You need to ensure that VM1 and VM2 can communicate with each other only. The solution must prevent VM1 and VM2 from communicating with Server1.

Which cmdlet should you use?

A. **Set-VMSwitch**
B. **Enable-VMSwitchExtension**
C. **Set-NetNeighbor**
D. **Remove-VMSwitchTeamMember**

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 12
You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 contains four virtual machines that are configured as shown in the following table.

Virtual machine name	Configuration
VM1	A shielded virtual machine that runs Windows Server 2012 R2
VM2	A shielded virtual machine that runs Windows Server 2016
VM3	A virtual machine that runs Windows Server 2012 R2 and has Secure Boot enabled
VM4	A virtual machine that runs Windows Server 2016 and has all of its drivers protected by using BitLocker Drive Encryption (BitLocker)

To which virtual machine or machines can you connect by using Virtual Machine Connection from Hyper-V Manager?

A. VM1, VM2, VM3, and VM4

B. VM4 only

C. VM1 and VM2 only

D. VM3 and VM4 only

E. VM2 only

QUESTION 17
Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory forest named contoso.com. The forest contains a member server named Server1 that runs Windows Server 2016. All domain controllers run Windows Server 2012 R2. Contoso com has the following configuration:

```
PS C:\> (Get-ADForest). ForestMode Windows2008R2Forest
PS C:\> (Get-ADDomain). DomainMode Windows2008R2Domain
PS C:\>
```

You plan to deploy an Active Directory Federation Services (AD FS) farm on Server1 and to configure device registration. You need to configure Active Directory to support the planned deployment.

Solution: You raise the domain functional level to Windows Server 2012 R2.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: (none)

Explanation:

QUESTION 18
You are configuring a Windows Server 2016 failover cluster in a workgroup. Before installing one of the nodes, you run the ipconfig /all command and receive the following output:

```
Windows IP Configuration

        Host Name..................... : Server1
        Primary DNS Suffix............ :
        Node Type..................... : Hybrid
        IP Routing Enabled............ : No
        WINS Proxy Enabled............ : No
        DNS Suffix Search List........ :

Ethernet adapter Ethernet:

        Connection-specific DNS Suffix.. :
        Description................... : Microsoft Hyper-V Network Adapter
        Physical Address.............. : 00-15-SD-01-62-17
        DHCP Enabled.................. : Yes
        Autoconfiguration Enabled...... : Yes
        Link-local IPv6 Address....... : fe80::7548:46d8:8ffc:d5ab%17(Preferred)
        IPv4 Address.................. : 192.168.1.154(Preferred)
        Subnet Mask................... : 255.255.255.0
        Default Gateway............... : 192.168.1.10
        DHCPv6 IAID................... : 369099429
        DHCPv6 Client DUID............ : 00-01-00-01-1A-1D-5D-60-00-02-A5-4E-F4-85
        DNS Servers................... : 192.168.1.32
        NetBIOS over TCPIP............ : Disabled
```

You need to ensure that Server1 can be added as a node in the cluster. What should you do?

A. Assign a static IP address
B. Change the **Node Type** to **Broadcast**
C. Configure a DNS suffix
D. Enable **NetBIOS over TCP/IP**

QUESTION 26
Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10.
On Server1, you have the following zone configuration:

```
ZoneName              ZoneType  IsAutoCreated  IsDsIntegrated  IsReverseLookupZone  IsSign
--------              --------  -------------  --------------  -------------------  ------
_msdcs.contoso.com    Primary   False          True            False                False
adatum.com            Forwarder False          False           False
contoso.com           Primary   False          True            False                False
fabrikam.com          Primary   False          False           False                True
TrustAnchors          Primary   False          True            False                False
```

You have the following subnets defined on Server1.

```
Name       IPv4Subnet         IPv6Subnet
----       ----------         ----------
Subnet1    (10.0.0.0/24)
Subnet2    (10.0.1.0/24)
Subnet3    (192.168.15.0/24)
Subnet4    (172.16.1.0/24)
```

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.
Solution: From Windows PowerShell on Server1, you run the **Export-DnsServerDnsSecPublicKey** cmdlet.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B

QUESTION 33
You deploy a Hyper-V server named Served in an isolated test environment. The test environment is prevented from accessing the Internet. Server1 runs the Datacenter edition of Windows Server 2016. You plan to deploy the following guest virtual machines on the server:

Quantity	Operating system	Domain member
10	Windows Server 2012 R2	Yes
4	Windows Server 2016	No
5	Windows Server 2016	Yes

Which activation model should you use for the virtual machines?

A. Multiple Activation Key (MAK)
B. Automatic Virtual Machine Activation (AVMA)
C. Original Equipment Manufacturer (OEM) key
D. Key Management Service (KMS)

Correct Answer: B

QUESTION 34
Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10.
On Server1, you have the following zone configuration:

ZoneName	ZoneType	IsAutoCreated	IsDsIntegrated	IsReverseLookupZone	IsSign
_msdcs.contoso.com	Primary	False	True	False	False
adatum.com	Forwarder	False	False	False	
contoso.com	Primary	False	True	False	False
fabrikam.com	Primary	False	False	False	True
TrustAnchors	Primary	False	True	False	False

You have the following subnets defined on Server1.

Name	IPv4Subnet	IPv6Subnet
Subnet1	(10.0.0.0/24)	
Subnet2	(10.0.1.0/24)	
Subnet3	(192.168.15.0/24)	
Subnet4	(172.16.1.0/24)	

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.

Solution: From a Group Policy object (GPO) in the domain, you modify the Network List Manager Policies (NLMP).

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: (none)
Explanation

QUESTION 35
Note: In this section, you'll see one or more sets of questions with the same scenario and problem. Each question presents a unique solution to the problem, and you must determine whether the solution meets the stated goals. Any of the solutions might solve the problem. It is also possible that none of the solutions solve the problem.

Once you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

Your network contains an Active Directory domain named contoso.com. The domain contains a DNS server named Server1. All client computers run Windows 10. On Server1, you have the following zone configuration:

```
ZoneName              ZoneType   IsAutoCreated  IsDsIntegrated  IsReverseLookupZone  IsSign
--------              --------   -------------  --------------  -------------------  ------
_msdcs.contoso.com    Primary    False          True            False                False
adatum.com            Forwarder  False          False           False
contoso.com           Primary    False          True            False                False
fabrikam.com          Primary    False          False           False                True
TrustAnchors          Primary    False          True            False                False
```

You have the following subnets defined on Server1.

```
Name        IPv4Subnet          IPv6Subnet
----        ----------          ----------
Subnet1     (10.0.0.0/24)
Subnet2     (10.0.1.0/24)
Subnet3     (192.168.15.0/24)
Subnet4     (172.16.1.0/24)
```

You need to prevent Server1 from resolving queries from DNS clients located on Subnet4. Server1 must resolve queries from all other DNS clients.

Solution: From Windows PowerShell on Setver1, you run the **Add-DnsServerTrustAnchor** cmdlet.

Does this meet the goal?

A. Yes
B. No

QUESTION 45
Note: This question is part of a series of questions that use the same similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have an Active Directory domain that contains two Hyper-V servers named Server1 and Server2. Server1 has Windows Server 2016 installed. Server2 has Windows Server 2012 R2 installed. Each Hyper-V server has three network cards. Each network card is connected to a different subnet. Server1 contains a dedicated migration network. Server2 contains a virtual machine named VM5.

You plan to perform a live migration of VM5 to Server1. You need to ensure that Server1 uses all available networks to perform the live migration of VM5.

What should you run?

A. the **Mount-VHD** cmdlet

B. the **Diskpart** command

C. the **Set-VHD** cmdlet

D. the **Set-VM** cmdlet

E. the **Set-VMHost** cmdlet

F. the **Set-VMProcessor** cmdlet

G. the **Install-WindowsFeature** cmdlet

H. the **Optimize-VHD** cmdlet

QUESTION 54
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	*None*
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3	File server	Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	*None*
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	*None*
VM2	Virtual machine hosted on Server5	*None*
VM3	Virtual machine hosted on Server5	*None*

The virtual machines are configured as follows:
▪ Each virtual machine has one virtual network adapter.
▪ VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
▪ All of the servers on the network can communicate with all of thevirtual machines.

You plan to implement nested virtual machines on VM1.

Which two features will you be prevented from using for VM1?

A. NUMA spanning
B. live migration

C. Dynamic Memory
D. Smart Pathing

QUESTION 55
Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Your network contains an Active Directory domain named contoso.com. The functional level of the forest and the domain is Windows Server 2008 R2. All servers in the domain run Windows Server 2016 Standard. The domain contains 300 client computers that run either Windows 8.1 or Windows 10.

The domain contains nine servers that are configured as shown in the following table.

Name	Configuration	Planned changes
Server1	Domain controller	*None*
Server2	File server	Run Failover Clustering and Storage Spaces Direct
Server3	File server	Run Failover Clustering and Storage Spaces Direct
Server4	Hyper-V host	Run shielded virtual machines
Server5	Hyper-V host	*None*
Server6	Member server	Run Active Directory Federation Services (AD FS)
VM1	Virtual machine hosted on Server5	*None*
VM2	Virtual machine hosted on Server5	*None*
VM3	Virtual machine hosted on Server5	*None*

The virtual machines are configured as follows:
▪ Each virtual machine has one virtual network adapter.

- VM1 and VM2 are part of a Network Load Balancing (NLB) cluster.
- All of the servers on the network can communicate with all of the virtual machines.

You create a new NLB cluster that contains VM3.

You need to ensure that VM2 can remain in the original cluster and be added to the new cluster.

What should you do first?

A. Add a new virtual network adapter to VM2.
B. Install the Web Application Proxy server role on VM2 and VM3.
C. Modify the default port rule.
D. Change the cluster operation mode.

QUESTION 61
You have a Windows Server 2016 failover cluster named Cluster1 that contains three nodes named Server1, Server2, and Server3. Each node hosts several virtual machines. The virtual machines are configured to fail over to another node in Cluster1 if the hosting node fails.

You need to ensure that if the Cluster service fails on one of the nodes, the virtual machine of that node will fail over immediately.

Which setting should you configure?

A. **FailureConditionLevel**

B. **QuarantineDuration**

C. **ResiliencyPeriod**

D. **ResiliencyLevel**

Correct Answer: D

Section: (none)
Explanation

2016/

QUESTION 62
Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.

You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has a virtual machine that uses a virtual hard disk (VHD) named disk1.vhdx.

You receive the following warning message from Event Viewer: "One or more virtual hard disks have a physical sector size that is smaller than the physical sector

size of the storage on which the virtual hard disk file is located." You need to resolve the problem that causes the warning message.

What should you run?

A. the **Mount-VHD** cmdlet
B. the **Diskpart** command
C. the **Set-VHD** cmdlet
D. the **Set-VM** cmdlet
E. the **Set-VMHost** cmdlet
F. the **Set-VMProcessor** cmdlet
G. the **Install-WindowsFeature** cmdlet
H. the **Optimize-VHD** cmdlet

Correct Answer: C

QUESTION 63
You deploy two servers that run Windows Server 2016.

You install the Failover Clustering feature on both servers.

You need to create a workgroup cluster.

What should you do?

A. Configure both of the server to be in a workgroup named Workgroup. Configure the Cluster Service to log on as Network Service. Run the **New-Cluster** cmdlet and specify an administrative access point of **None**.
B. Create matching local administrative accounts on both of the servers. Assign the same primary DNS suffix to both of the servers. Run the **New-Cluster** cmdlet and specify an administrative access point of **DNS**.
C. Configure both of the server to be in a workgroup named Workgroup. Configure the Cluster Service to log on as Network Service. Run the **New-Cluster** cmdlet and specify an administrative access point of **DNS**.

D. Create matching local administrative accounts on both of the servers. Assign the same primary DNS suffix to both of the servers. Run the **New-Cluster** cmdlet and specify an administrative access point of **None**

QUESTION 64
You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. The hosts are nodes in failover cluster.

You have a virtual machine named VM1. VM1 connects to a virtual switch named vSwitch1.

You discover that VM1 automatically live migrates when vSwitch temporarily disconnects.

You need to prevent VM1 from being live migrated when vSwitch1 temporarily disconnects.

What should you do?

A. Run the **Set-VMNetworkAdapter** cmdlet and set StormLimit to **0**.
B. From the network adapter setting of VM1, disable the Heartbeat integration service.
C. Run the **Set-VMNetworkAdapter** cmdlet and set IsManagementOS to **False**.
D. From the network adapter setting of VM1, disable the Protected network setting.

QUESTION 67
Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016.

Each server has an operating system disk and four data disks. All of the disks are locally attached SATA disks. Each disk is a basic disk, is initialized as an MBR disk, and has a single NTFS volume.

You plan to implement Storage Spaces Direct by using the data disks on Server1 and Server2.

You need to prepare the data disks for the Storage Spaces Direct implementation.

What should you do?

A. Format the volumes on the data disks as exFAT.
B. Initialize the data disks as GPT disks and create an ReFS volume on each disk.
C. Convert the data disks to dynamic disks.
D. Delete the volumes from the data disks.

Correct Answer: D

QUESTION 68
Your network contains a new Active Directory domain named contoso.com.

You have a security policy that states that new servers should run Nano Server whenever possible.

Which server role can be deployed on a Nano Server?

A. **Active Directory Certificate Services**
B. **DHCP Server**
C. **Remote Desktop Services**
D. **DNSServer**

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:
Explanation:

QUESTION 69
You have an Active Directory domain named contoso.com.

The computers in contoso.com are installed by using Windows Deployment Services.

You have a server named Server1 that runs Windows Server 2016 and is a member of contoso.com. Server1 has the Hyper-V role installed. Virtual machines on Server1 are connected to an external switch named Switch1.

You create a virtual machine named VM1 on Server1 by running the following cmdlets.

```
Add-VM VM1
Add-VMHardDiskDrive -VMName VM1 -ControllerType IDE -Path c:\VMs\Disk1.vhd
Add-VMNetworkAdapter -VMName VM1
```

You need to ensure that you can install the operating system on VM1 by using Windows Deployment Services.

What should you do?

A. Modify the *DefaultFlowMinimumBandwidthWeight* parameter of Switch1.
B. Add a SCSI controller to VM1.

C. Add a legacy network adapter to VM1.

D. Modify the *SwitchType* parameter of Switch1.

Correct Answer: C

QUESTION 70
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest.

You install Windows Server 2016 on 10 virtual machines.

You need to deploy the Web Server (IIS) server role identically to the virtual machines.

Solution: From Windows System Image Manager, you create an answer file, you copy the file to C:\Sysprep on each virtual machine, and then you run the ApplyImage cmdlet.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: (none)
Explanation
Explanation/Reference:

QUESTION 71
You have a server named Server1 that runs Windows Server 2016.

On Server1, you use the Basic template to create a new Data Collector Set named CollectorSet1.

You need to configure CollectorSet1 to generate performance alerts.

What should you do before you start CollectorSet1?

A. Modify the performance counter data collector of CollectorSet1.
B. Add a new data collector to CollertorSet1.
C. Modify the configuration data collector of CollectorSet1.
D. Add a new task to CollectorSet1.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:
We need to add performance counter alert data collector to the set.

QUESTION 72
You plan to install a Nano Server on a physical server named Nano1. Nano1 will host several virtual machines that will use live migration.

Which package should you install on Nano1?

A. **Microsoft-NanoServer-SecureStartup-Package**

B. **Microsoft-NanoServer-ShieldedVM-Package**

C. **Microsoft-NanoServer-Compute-Package**

D. **Microsoft-NanoServer-FailoverCluster-Package**

E. **Microsoft-NanoServer-Storage –Package**

Correct Answer: C

QUESTION 80
You have a server named Server1 that runs Windows Server 2016. Server1 is a Hyper-V host that hosts a virtual machine named VM1.

Server1 has three network adapter cards that are connected to virtual switches named vSwitch1, vSwitch2 and vSwitch3.

You configure NIC Teaming on VM1 as shown in the exhibit.
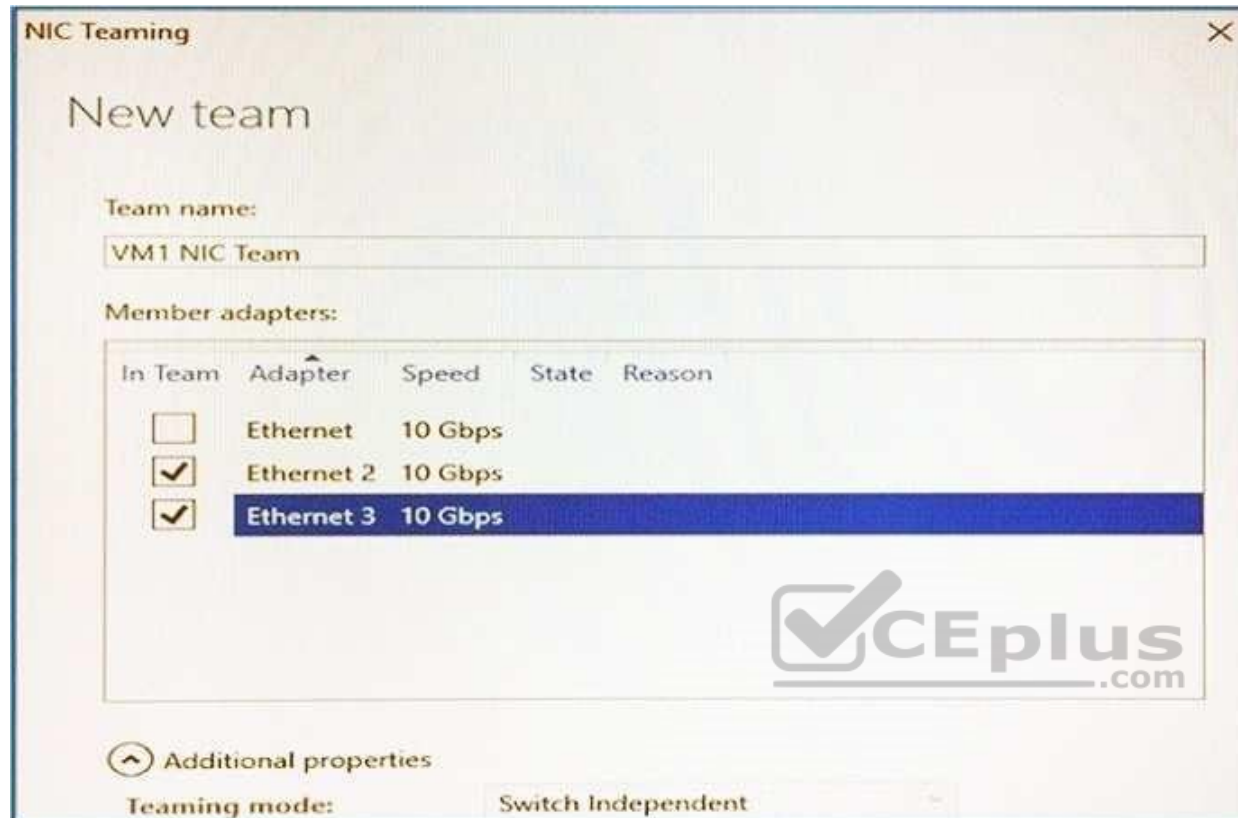

You need to ensure that VM1 will retain access to the network if a physical adapter card fails on Server1. What should you do?

A. From Hyper-V Manager on Server1, modify the settings of VM1.
B. From Windows PowerShell on Server1, run the **Set-VmSwitch** cmdlet.

C. From the properties of the NIC team on VM1, add the adapter named Ethernet to the NIC team.
D. From the properties of the NIC team on VM1, change the load balancing of the NIC team.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 81
You have a Nano Server that runs Windows Server 2016. The Nano Server runs on a physical machine.

You have not installed any packages on the server.

You attach a new disk to the server, and you initialize the disk as a GPT disk.

You need to create a ReFS-formatted volume on the new disk.

What should you do first?

A. From the physical server, log on to the Nano Server Recovery Console.
B. Install the Microsoft NanoServer-Host-Package package.
C. Run the **Format-Volume** cmdlet and specify the **-FileSystem** switch.
D. Install the Microsoft NanoServer-Storage-Package package.

Correct Answer: D
Section: (none)

QUESTION 82
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After your answer a question in this section, you will NOT be able to return to it.
As a result, these questions will not appear in the review screen.
You have a server named Server1 that runs Windows Server 2016.

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You mount the volume to C:\Backup, and you format the volume by using NTFS.

Does this meet the goal?

A. Yes
B. No

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:

QUESTION 83
You create a Nano server image named Nano1.vhdx by using the **New-NanoServerImage** cmdlet.

You attach Nano1.vhdx to a Generation 1 virtual machine named Nano1.

When you start Nano1, you get the following error message:

"Boot failure. Reboot and select proper Boot device or Insert Boot Media in selected Boot device"

You need to successfully start Nano server.

What should you do?

A. Attach Nano1.vhdx to a SCSIcontroller.
B. Recreate Nano1 as a Generation 2 virtual machine.
C. Increase the memory of Nano1 to 512 Mb.

D. Modify the BIOS settings of Nano1.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:
A Generation 1 VM cannot boot from a vhdx disk; only a Generation 2 VM can boot from a vhdx disk.

QUESTION 94
You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 hosts a virtual machine named VM1. VM1 is in a workgroup. VM1 is currently in a running state.

You need to create 10 copies of VM1 on Server1 in the least amount of time possible.

Which cmdlets should you use?

A. **Stop-VM**, and then **Import-VM**
B. **Export-VM**, and then **Import-VM**
C. **Checkpoint-VM**, and then **New-VM**
D. **Copy-VMFile**, and then **New-VM**

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:

QUESTION 95
You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016.

Server1 and Server2 are connected to the same network.

On Server1 and Server2, you create an external network switch named Switch1.

You have the virtual machines shown in the following table.

Virtual machine name	IP address	Subnet mask	Hyper-V host
VM1	192.168.1.16	255.255.255.0	Server1
VM2	192.168.1.32	255.255.255.0	Server2
VM3	192.168.1.48	255.255.255.0	Server2

All three virtual machines are connected to Switch1.

You need to prevent applications in VM3 from being able to capture network traffic from VM1 or VM2. The solution must ensure that VM1 retains network connectivity.

What should you do?

A. On Server2, configure the VLAN ID setting of Switch1.
B. On Server2, create an external switch and connect VM3 to the switch.

C. Modify the subnet mask of VM1 and VM2.
D. Configure network virtualization for VM1 and VM2.

Correct Answer: D
Section: (none)

QUESTION 96
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a server named Server1 that runs Windows Server 2016.

You plan to use Windows Server Backup to back up all of the data on Server1.

You create a new volume on Server1.

You need to ensure that the new volume can be used as a backup target.

The backup target must support incremental backups.

Solution: You mount the volume to C:\Backup, and you format the volume by using exFAT.

Does this meet the goal?

A. Yes
B. No

Correct Answer: B

Section: (none)
Explanation

QUESTION 98
Your network contains an Active Directory domain. The domain contains a new file server named Server1 that runs a Server Core installation of Windows Server 2016.

Server1 has an ReFS-formatted volume D: and NTFS-formatted volume E: The volumes do not contain any data.

You install the Data Deduplication role service on Server1.

You need to implement Data Deduplication for volumes on D: and E:.

Solution: From Windows PowerShell, you run **Format-Volume E: -FileSystem ReFS** and **Enable-DeDupVolume -Volume D:,E:**.
Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: (none)
Explanation

QUESTION 100

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You network contains an Active Directory domain named contoso.com.

You need to create a Nano Server image named Nano1 that will be used as a virtualization host. The Windows Server 2016 source files are located in drive D.

Solution: You run the following cmdlet.

```
New-NanoServerImage -Edition Datacenter -DeploymentType Host
-Defender EnableEMS -MediaPath 'D:\' -TargetPath
C:\Nano1\Nano1.wim -ComputerName Nano1 -DomainName Contoso.com
```

Does this meet the goal?

A. Yes
B. No

Correct Answer: B
Section: (none)

QUESTION 101
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You network contains an Active Directory forest named contoso.com. The forest contains a child domain named eu.contoso.com.

You plan to implement live migration between two Hyper-V hosts that run Windows Server 2016. The hosts are configured as shown in the following table.

Host name	Configuration
Host1	• Is a member of the contoso.com domain • Uses an Intel Xeon processor released in 2012 • Has an external virtual switch named Switch1 • Hosts a virtual machine named VM1 that connects to Switch1
Host2	• Is a member of the eu.contoso.com domain • Uses an Intel Xeon processor released in 2016 • Has an external virtual switch named Switch1

You need to ensure that you can perform a live migration of VM1 from Host1 to Host2.

Solution: On Host1 and Host2, you create a private switch named Priv1, and then you connect VM1 to Priv1.

Does meet the goal?

A. Yes
B. No

Correct Answer: B
Section: (none)
Explanation

QUESTION 105
Your network contains an Active Directory domain named contoso.com. The domain contains a Hyper-V host named Server1 that runs Windows Server 2016.

Server1 hosts four virtual machines that are members of the domain. The virtual machines are configured as shown in the following table.

Virtual machine name	Operating system	Virtual machine generation	Type of VHD file
VM1	Windows 10	2	VHD
VM2	Windows Server 2016	2	VHD
VM3	Windows Server 2012 R2	2	VHDx
VM4	Windows Server 2016	1	VHDx

Which virtual machines can you manage by using PowerShell Direct?

A. VM1, VM2, and VM3
B. VM1, VM2, and VM4
C. only VM2

D. only VM4

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
Explanation:
To use PowerShell Direct, the host operating system must run at least Windows 10 or Windows Server 2016.

References: https://docs.microsoft.com/en-us/windows-server/virtualization/hyper-v/manage/manage-windows-virtual-machines-with-powershell-direct#whatsrequired-to-use-powershell-direct

QUESTION 106
You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. The hosts are nodes in failover cluster.

A highly available virtual machine named VM1 is running on Server1.

You need to move VM1 to Server2 while minimizing downtime.

What should you do?

A. From Windows PowerShell, run **Move-ClusterGroup**

B. From Hyper-V Manager, use the **Move** action.

C. From Failover Cluster Manager, use the **Move Virtual Machine Storage** option.

D. From Windows PowerShell, run **Move-VM**.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
QUESTION 107
You have two Hyper-V hosts named Server1 and Server2 that run Windows Server 2016. Server1 hosts a virtual machine named VM1 that is in a Running state.

On Server1, you export VM1 and then you import VM1 on Server2.

What is the current state of VM1 on Server2?

A. Paused
B. Off
C. Saved
D. Running

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
References: https://blog.workinghardinit.work/2016/06/16/live-export-a-running-virtual-machine-or-a-checkpoint/

QUESTION 108
You have a file server named Server1 that runs Windows Server 2016.

Object access auditing is configured on Server1.

You need to filter the Security event log to show all log entries that relate to a user named User1.

What should you do?

A. Right-click the **Security** log, and then click **Filter Current Log…** On the Filter tab, type a value in the User box.
B. Right-click the **Security** log, and then click **Filter Current Log…** On the Filter tab, select a value from the Event sources box.
C. Right-click the **Security** log, and then click **Create Custom View…** On the Filter tab, type a value in the User box.
D. Right-click the **Security** log, and then click **Filter Current Log…** On the XML tab, modify the QueryList entry and set an EventData tag.

Correct Answer: A
Section: (none)
Explanation

Explanation/Reference:
Explanation:

Right clicking the event log name and selecting the "Filter Current Log" will display various options for filtering the event log.

These options are:
▪ Time logged: There are pre-canned filters for the last hour, last 12 hours, last 24 hours, last week and last 30 days. Additionally you can specify a custom range.

- Event level: Choose to show only events that match the specified level critical, warning etc. ▪
Event Source: Select to only see events from MSI Installer, DHCP client etc.
- EventID: Specify the event ID.
- Keywords: Specify filters based on Audit Failure, Audit success
- User
- Computer(s)

References: https://blogs.technet.microsoft.com/rmilne/2014/08/06/quick-tip-event-viewer-filtering/

QUESTION 109
You have a server named Server1 that runs Windows Server 2016.

The server has an application named App1. App1 writes entries to the Application event log when errors are encountered. The events have IDs of either 111 or 112.

You need to restart the service whenever either of these events is logged.

What should you do?

A. From Windows PowerShell, run the **Write-EventLog** cmdlet and specify the-*EventID* parameter and the -*Source* parameter.
B. From Event Viewer, create a custom view that has a filter for the event IDs.
C. From Event Viewer, create a subscription that has a filter for the event IDs.
D. From Task Scheduler, use **Create Task** to create one task that includes triggers for both event IDs.
E. From Windows PowerShell, run the **Get-SMServerEvent** cmdlet and pipe the output to the **Start-NetEventSession** cmdlet.
F. From Performance Monitor, add an Event Trace Session data collector that uses the Microsoft- Windows-Eventlog provider.

Correct Answer: D
Section: (none)
Explanation

Explanation/Reference:

QUESTION 110
You have a Hyper-V host named Server1 that runs Windows Server 2016. Server1 has ab external virtual switch named Switch1. Server1 hosts a virtual machine named VM1 that runs Windows Server 2016. VM1 has one network adapter. The network adapter connects to Switch1.

You need to limit the maximum network bandwidth available to VM1 to 100 Mbps. The solution must limit the bandwidth for VM1 only.

Which cmdlet should you run?

A. **Set-NetAdapter**

B. **Set-VMNetworkAdapter**

C. **Set-VM**

D. **Set-NetAdapterVmq**

E. **Set-NetworkSwitchPortProperty**

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
The Set-VMNetworkAdapterVlan cmdlet configures virtual LAN settings for the traffic through a virtual network adapter.

Incorrect Answers:
A: The Set-NetAdapter cmdlet sets the basic properties of a network adapter such as virtual LAN (VLAN) identifier (ID) and MAC address.
C: The Set-VM cmdlet configures a virtual machine.
D: The Set-NetAdapterVmq cmdlet sets the virtual machine queue (VMQ) properties of a network adapter. VMQ is a scaling networking technology for Hyper-V switch that improves network throughput by distributing processing of network traffic for multiple virtual machines among multiple processors.

QUESTION 111
You have a Windows Server 2016 failover cluster that contains two servers named Server1 and Server2.

The Cluster Service on Server1 fails.

You need to identify the cause of the failure.

What should you do?

A. From Windows PowerShell, run the **Get-ClusterNode** cmdlet.

B. From Event Viewer, review the Application event log.

C. From Windows PowerShell, run the **Get-ClusterLog** cmdlet.

D. From Event Viewer, review the System event log.

Correct Answer: C
Section: (none)
Explanation

Explanation/Reference:
References: https://blogs.msdn.microsoft.com/clustering/2015/05/14/windows-server-2016-failover-cluster-troubleshooting-enhancements-cluster-log/

QUESTION 112
You have a server named Server1 that is an iSCSI target. You have a server named Server2 that runs Windows Server 2016. Server2 has an iSCSI disk named Disk1 that is hosted on Server1. Disk1 contains one volume that is assigned a drive letter of E.

You need to increase the size of Disk1.

What should you do?

A. Run the **Resize-IscsiVirtualDisk** cmdlet and specify the *-ComputerName Server2* parameter.
B. Run the **Resize-IscsiVirtualDisk** cmdlet and specify the *-ComputerName Server1* parameter.
C. Run the **Resize-Partition** cmdlet and specify the *-ComputerName Server1* parameter.
D. Run the **Resize- Partition** cmdlet and specify the *-ComputerName Server2* parameter.

Correct Answer: B
Section: (none)
Explanation

Explanation/Reference:
The Resize-IscsiVirtualDisk cmdlet resizes a virtual disk either by expanding or compacting an existing virtual disk.
The -ComputerName parameter specifies the computer name, or IP address, of the remote computer, if this cmdlet is run on a remote computer. If you do not specify a value for this parameter, the cmdlet uses the local computer.

Incorrect Answers:
A: Resize-IscsiVirtualDisk would be run on Server2. Server2 has an iSCSI disk named Disk1 that is hosted on Server1. Therefore, Server1 would be specified in the -ComputerName parameter.
C, D: The Resize-Partition cmdlet resizes a partition and the underlying file system. It does not take a -ComputerName parameter.
