QUESTION 6

After installation of a host in your test environment, you need to move it to production. The only major change that needs to be made is that the hostname of the server needs to change.

What are two ways that an administrator can change the host name without editing configuration files on the host directly? (Choose two.)

- A. Login to the Direct Console User Interface and change it from here.
- B. Edit the Default TCP/IP Configuration from the vSphere Web Client.
- C. Use the Ruby vSphere Client to send a script to the ESXi host that updates the hostname.
- D. Update the information in DNS and the ESXi host will automatically update with these changes.

QUESTION 122

Users of an application are reporting performance issues. The following performance values are observed in the vSphere Web Client:

- Host CPU utilization is 90%
- Virtual Machine memory utilization is consistently greater than 90%
- CPU Ready values are higher than 20%

What could be the cause of the application performance issue?

- A. The host is lacking the CPU resources required to meet the demand.
- B. The host is lacking the memory resources required to meet the demand.
- C. The virtual machine is lacking the CPU resources required to meet the demand.
- D. The virtual machine is lacking the memory resources required to meet the demand.

QUESTION 123

- An administrator wants to add a web server to an existing multi-tier application consisting of three virtual machines:
- A web server
- A database server

- An application server

The web server should be added to the application when the primary web server reaches:

- 70% vCPU utilization
- 55% active memory

Which option will achieve this result?

- A. Create a virtual machine alarm with an action to run a script that starts a new instance of the web server.
- B. Create a host cpu and memory alarm with an action to run a script that starts a new instance of the webserver.
- C. Configure HA application monitoring for the web server and set it to trigger deployment of a new instance of the web server.
- D. Configure Fault Tolerance on the virtual machine and leave the secondary machine disabled until needed.
