#### QUESTION 49

An organization uses Microsoft 365 Business to secure their data.

Many users install the organization's data on their personal tablets and phones.

You need to protect the organization's data stored on users' devices.

Which three features support device security? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Remotely wiping company data
- B. Enabling Advanced Threat Protection for users
- C. Disabling the device remotely
- D. Automatically deleting files after 90 days of inactivity
- E. Requiring users to have a PIN on their device

**Correct Answer:** ADE

**Section:** (none)

**Explanation**

**Explanation/Reference:**

Section: Describe security, compliance, privacy, and trust in Microsoft 365

You can manage many of the Microsoft 365 Business security features in the admin center, which gives you a simplified way to turn these features on or off. In the admin center, you can do the following:

Set application management settings for Android or iOS devices.

These settings include deleting files from an inactive device after a set period, encrypting work files, requiring that users set a PIN, and so on.

Set application protection settings for Windows 10 devices.

These settings can be applied to company data on both company-owned, or personally owned devices. Set device protection settings for Windows 10 devices.

You can enable BitLocker encryption to help protect data in case a device is lost or stolen, and enable Windows Exploit Guard to provide advanced protection against ransomware. Remove company data from devices.

You can remotely wipe company data if a device is lost, stolen, or an employee leaves your company.

Reset Windows 10 devices to their factory settings.

You can reset any Windows 10 devices that have device protection settings applied to them.
