Exam A

QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active computers that run Windows 10.

You need to deploy 10 Privileged used by all users.

Solution: You deploy 10 physical customized Windows image.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

Section: (none)

Explanation

Directory forest named contoso.com. All servers run Windows Server 2016. The forest contains 2,000 client All client computers are deployed from a customized Windows image.

Access Workstations (PAWs). The solution must ensure that administrators can access several client applications

computers and configure each one as a virtualization host. You deploy the operating system on each host by using On each host, you create a guest virtual machine and configure the virtual machine as a PAW.

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2016. The forest contains 2,000 client computers that run Windows 10. All client computers are deployed from a customized Windows image.

You need to deploy 10 Privileged Access Workstations (PAWs). The solution must ensure that administrators can access several client applications used by all users.

Solution: You deploy one physical computer and configure it as Hyper-V host that runs Windows Server 2016. You create 10 virtual machines and configure each one as a PAW.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Section: (none)

QUESTION 4

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contain an Active Directory domain named contoso.com. The domain contains a computer named Computer1 that runs Windows 10. Computer1

connects to a home network and a corporate network.
The corporate network uses the 172.16.0.0/24 address space internally.
Computer1 runs an application named Appl that listens to port 8080.
You need to prevent connections to Appl when Computer1 is connected to the home network.
Solution: From Group Policy Management, you create an AppLocker rule.
Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Section: (none)

Explanation

QUESTION 7

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2016. All client computers run Windows 10.
The relevant objects in the domain are configured as shown in the following table.

Server name	Object	Organizational unit (OU) name
Server1	Computer account	Servers
Server2	Computer account	Servers
User1	User account	Operations Users

You need to assign User1 the right to restore files and folders on Server1 and Server2.

Solution: You create a Group Policy object (GPO), you link the GPO to the Servers OU, and then you modify the Users Rights Assignment in the GPO

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: B

Section: (none)

Explanation

QUESTION 10

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this sections, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains multiple Hyper-V hosts.

You need to deploy several critical line-of-business applications to the network to meet the following requirements:

- The resources of the applications must be isolated from the physical host.
- Each application must be prevented from accessing the resources of the other applications.
- The configurations of the applications must be accessible only from the operating system that hosts the application

Solution: You deploy a separate Windows container for each application.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 13

Your network contains an Active Directory domain named contoso.com. The domain contains 1,000 client computers that run Windows 10.

A security audit reveals that the network recently experienced a Pass-the-Hash attack. The attack was initiated from a client computer and accessed Active Directory objects restricted to the members of the Domain Admins group.

You need to minimize the impact of another successful Pass-the-Hash attack on the domain.

What should you recommend?

- A. Instruct all users to sign in to a client computer by using a Microsoft account.
- B. Move the computer accounts of all the client computers to a new organizational unit (OU). Remove the permissions to the new OU from the Domain Admins group.
- C. Instruct all administrators to use a local Administrators account when they sign in to a client computer.
- D. Move the computer accounts of the domain controllers to a new organizational unit (OU). Remove the permissions to the new OU from the Domain Admins group.

Correct Answer: C

Section: (none)

QUESTION 14

Your network contains an Active Directory forest named contoso.com. The forest functional level is Windows Server 2012. All servers run Windows Server 2016.

You create a new bastion forest named admin.contoso.com. The forest functional level of admin.contoso.com is Windows Server 2012 R2.

You need to implement a Privileged Access Management (PAM) solution.

Which two actions should you perform? Each correct-answer presents part of the solution.

- A. Raise the forest functional level of admin.contoso.com.
- B. Deploy Microsoft Identify Management (MIM) 2016 to admin.contoso.com.
- C. Configure contoso.com to trust admin.contoso.com.
- D. Deploy Microsoft Identity Management (MIM) 2016 to contoso.com.
- E. Raise the forest functional level of contoso.com.
- F. Configure admin.contoso.com to trustcontoso.com.

Correct Answer: BC

QUESTION 15

Your network contains an Active Directory domain named contoso.com. The domain contains two servers named Server1 and Server2 that run Windows Server 2016.

Server1 is configured as a domain controller.

You configure Server1 as a Just Enough Administration (JEA) endpoint. You configure the required JEA rights for a user named User1.

You need to tell User1 how to manage Active Directory objects from Server2.

What should you tell User1 to do first on Server2?

- A. From a command prompt, runntdsutil.exe.
- B. From Windows PowerShell, run the Import-Module cmdlet.
- C. From Windows PowerShell, run the Enter-PSSession cmdlet.
- D. Install the management consoles for Active Directory, and then launch Active Directory Users and Computers.

Correct Answer: C
