350-501

Implementing and Operating Cisco Service Provider Network Core Technologies

Exam A**QUESTION 1****DRAG DROP**

Drag and drop the OSs from the left onto the correct descriptions on the right.

Select and Place:

Correct Answer:

Section: Architecture

Explanation

Explanation/Reference:

Reference: <https://specialties.bayt.com/en/specialties/q/276369/what-is-the-key-difference-between-ios-ios-xe-and-ios-xr-for-cisco-devices/>

QUESTION 2

Refer to the exhibit. P3 and PE4 are at the edge of the service provider core and serve as ABR routers. Aggregation areas are on either side of the core.

Which statement about the architecture is true?

- A. To support seamless MPLS, the BGP route reflector feature must be disabled.
- B. If each area is running its own IGP, BGP must provide an end-to-end MPLS LSP.
- C. If each area is running its own IGP, the ABR routers must redistribute the IGP routing table into BGP.
- D. To support seamless MPLS, TDP must be used as the label protocol.

Correct Answer: B

Section: Architecture

Explanation

Explanation/Reference:

QUESTION 3 Which component is similar to an EVPN instance?

- A. router distinguisher
- B. MPLS label
- C. IGP router ID
- D. VRF

Correct Answer: D

Section: Architecture

Explanation

Explanation/Reference:

QUESTION 4

Why do Cisco MPLS TE tunnels require a link-state routing protocol?

- A. The link-state database provides segmentation by area, which improves the path-selection process.
- B. The link-state database provides a data repository from which the tunnel endpoints can dynamically select a source ID.
- C. Link-state routing protocols use SPF calculations that the tunnel endpoints leverage to implement the tunnel.
- D. The tunnel endpoints use the link-state database to evaluate the entire topology and determine the best path.

Correct Answer: D

Section: Architecture

Explanation

Explanation/Reference:

QUESTION 5

Refer to the exhibit. BGPsec is implemented on R1, R2, R3, and R4. BGP peering is established between neighboring autonomous systems.

Which statement about implementation is true?

- A. BGP updates from the iBGP peers are appended with a community of local-as.
- B. BGP updates from the all BGP peers are appended with a community of no-export.
- C. BGP updates from the eBGP peers are appended with an additional AS path value that is statically set by the domain administrator.
- D. BGP updates from the eBGP peers are appended with a BGPsec attribute sequence that includes a public key hash and digital signature.

Correct Answer: D

Section: Architecture

Explanation

Explanation/Reference:

QUESTION 6 You are configuring MPLS traffic-engineering tunnels in the core. Which two ways exist for the tunnel path across the core? (Choose two.)

- A. The dynamic path option is supported only with IS-IS.
- B. Tunnels can be configured with dynamic path or explicitly defined path.
- C. A zero bandwidth tunnel is not a valid option.
- D. The bandwidth statement creates a “hard” reservation on the link.
- E. Tunnel links inherit IGP metrics by default unless overridden.

Correct Answer: BE

Section: Architecture

Explanation

Explanation/Reference:

QUESTION 7

Which configuration mode do you use to apply the **mpls ldp graceful-restart** command in IOS XE Software?

- A. MPLS LDP neighbor
- B. interface
- C. MPLS
- D. global

Correct Answer: D

Section: Architecture

Explanation

Explanation/Reference:

Reference: https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/mp_ha/configuration/xe-3s/mp-ha-xe-3s-book/mp-ldp-grace-rstrt.html

QUESTION 8

After you analyze your network environment, you decide to implement a full separation model for Internet access and MPLS L3VPN services.

For which reason do you make this decision?

- A. It enables EGP and IGP to operate independently.
- B. It enables you to choose whether to separate or centralize each individual service.
- C. It is easier to manage a system in which services are mixed.
- D. It requires only one edge router.

Correct Answer: A

Section: Architecture

Explanation

Explanation/Reference:

QUESTION 9 Which statement about the Cisco MPLS TE forwarding adjacency feature is true?

- A. It enables the MPLS core to use EIGRP as the routing protocol.
- B. It enables the Cisco MPLS TE tunnel to be advertised into the running IGP.
- C. It enables the tailend router to advertise routes to the headend router over the tunnel.
- D. It enables the headend and tailend routers to establish a bidirectional tunnel.

Correct Answer: B

Section: Architecture

Explanation

Explanation/Reference:

Reference: https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/mp_te_path_setup/configuration/xe-16/mp-te-path-setup-xe-16-book/mpls-traffic-engineering-forwarding-adjacency.pdf

QUESTION 10 While implementing TTL security, you issue the **PE(config-router-af)#neighbor 2.2.2.2 ttl-security hops 2** command.

After you issue this command, which BGP packets does the PE accept?

- A. to 2.2.2.2, with a TTL of 2 or more
- B. from 2.2.2.2, with a TTL of less than 2
- C. to 2.2.2.2, with a TTL of less than 253
- D. from 2.2.2.2, with a TTL of 253 or more

Correct Answer: D
Section: Architecture
Explanation

Explanation/Reference:

QUESTION 11

```
ip flow-export destination 192.168.1.2
ip flow-export version 9

interface gigabitethernet0/1
ip flow ingress
```

Refer to the exhibits. Which information is provided for traceback analysis when this configuration is applied?

- A. source interface
- B. packet size distribution
- C. IP sub flow cache
- D. BGP version

Correct Answer: C
Section: Architecture
Explanation

Explanation/Reference:

VCEup

QUESTION 12

Refer to the exhibit. R1 is connected to two service providers and is under a DDoS attack.

Which statement about this design is true if URPF in strict mode is configured on both interfaces?

- A. R1 drops all traffic that ingresses either interface that has a FIB entry that exits a different interface.
- B. R1 drops destination addresses that are routed to a null interface on the router.
- C. R1 permits asymmetric routing as long as the AS-PATH attribute entry matches the connected AS.
- D. R1 accepts source addresses on interface gigabitethernet0/1 that are private addresses.

Correct Answer: A

Section: Architecture
Explanation
Explanation/Reference:

QUESTION 13

```
ip cef
interface gigabitethernet0/1
ip verify unicast source reachable-via any
```

Refer to the exhibit. Router 1 was experiencing a DDoS attack that was traced to interface gigabitethernet0/1.

Which statement about this configuration is true?

- A. Router 1 accepts all traffic that ingresses and egresses interface gigabitethernet0/1.
- B. Router 1 drops all traffic that ingresses interface gigabitethernet0/1 that has a FIB entry that exits a different interface.
- C. Router 1 accepts source addresses that have a match in the FIB that indicates it is reachable through a real interface.
- D. Router 1 accepts source addresses on interface gigabitethernet0/1 that are private addresses.

Correct Answer: C
Section: Architecture
Explanation

Explanation/Reference:

Reference: https://www.cisco.com/c/en/us/td/docs/switches/datacenter/sw/4_1/nx-os/security/configuration/guide/sec_nx-os-cfg/sec_urpf.html

QUESTION 14

```
Router 1:

ip route 192.168.1.0 255.255.255.0 null 0 tag 1

route-map ddos
match tag 1
set local preference 150
set community no export

route-map ddos permit 20

router bgp 65513
 redistribute static route-map ddos

Router 2:

Interface gigabitethernet0/1
ip verify unicast reverse-path
```

Refer to the exhibit. An engineer is preparing to implement data plane security configuration.

Which statement about this configuration is true?

- A. Router 2 is the router receiving the DDoS attack.
- B. Router 1 must be configured with uRPF for the RTBH implementation to be effective.
- C. Router 1 is the trigger router in a RTBH implementation.
- D. Router 2 must configure a route to null 0 for network 192.168.1.0/24 for the RTBH implementation to be complete.

Correct Answer: A

QUESTION 21

Router 1:

```
ip route 192.0.2.0 255.255.255.0 null 0
ip route 192.168.1.0 255.255.255.0 null 0 tag 1
```

```
route-map ddos
 match tag 1
 set ip next-hop 192.0.2.1
 set local-preference 150
 set community no export
```

```
route-map ddos permit 20
```

```
router bgp 65513
 redistribute static route-map ddos
```

Router 2:

```
ip route 192.0.2.0 255.255.255.0 null 0
```

Refer to the exhibit. An engineer is preparing to implement data plane security configuration.

Which statement about this configuration is true?

- A. Router 1 and Router 2 advertise the route to 192.0.2.0 to all BGP peers.
- B. All traffic to 192.168.1.0/24 is dropped.
- C. All traffic is dropped.
- D. Router 1 drops all traffic with a local-preference set to 150.

Correct Answer: A

QUESTION 23

Which configuration enables BGP FlowSpec client function and installation of policies on all local interfaces?

- A. `flowspec address-family ipv4 local-install interface-all`
- B. `flowspec address-family ipv4 install interface-all local`
- C. `flowspec address-family ipv4 install interface-all`
- D. `flowspec address-family ipv4 local-install all-interface`

Correct Answer: A

Section: Architecture

Explanation

Explanation/Reference:

Reference: https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/iproute_bgp/configuration/xr-16-6/irg-xr-16-6-book/C3PL-BGP-Flowspec-Client.html

QUESTION 24

```
CE1#
interface FastEthernet/0/0/1
description **** HUB CE non router ****
ip address 10.0.12.1 255.255.255.0

router ospf 100
log-adjacency-changes
network 10.0.12.0 0.0.255.255 area 0

CE2#
interface Serial0/0/9
description **** SPOKE CE router ****
encapsulation ppp
ip address 10.0.12.12 255.255.255.0

router ospf 100
log-adjacency-changes
network 10.0.12.0 0.0.255.255 area 0
```

VCEup

Refer to the exhibit. A network engineer is configuring customer edge routers to finalize a L2VPN over MPLS deployment. Assume that the AToM L2VPN service that connects the two CEs is configured correctly on the service provider network.

Which action causes the solution to fail?

- A. OSPF does not work with L2VPN services.
- B. The routing protocol network types are not compatible.
- C. A loopback with a /32 IP address has not been used.
- D. The xconnect statement has not been defined.

Correct Answer: B

Section: Architecture

Explanation**Explanation/Reference:**

QUESTION 25 An engineer working for telecommunication company needs to secure the LAN network using a prefix list.

Which best practice should the engineer follow when he implements a prefix list?

- A. An engineer must identify the prefix list with a number only.
- B. The final entry in a prefix list must be /32.
- C. An engineer must include only the prefixes for which he needs to log activity.
- D. An engineer must use nonsequential sequence numbers in the prefix list so that he can insert additional entries later.

Correct Answer: D

Section: Architecture

Explanation**Explanation/Reference:****QUESTION 26**

```
interface gigabitethernet1/0
xconnect 192.168.0.1 12 encapsulation mpls pw-class cisco
```

Refer to the exhibit. Which effect of this configuration is true?

- A. It enables MPLS on the interface.
- B. It creates a pseudowire class named cisco.
- C. It enables AToM on interface gigabitethernet1/0.
- D. It enables tagging for VLAN 12 on the interface.

Correct Answer: C

Section: Architecture

QUESTION 28 A network engineer must enable the helper router to terminate the OSPF graceful restart process if it detects any changes in the LSA.

Which command enables this feature?

- A. **nsf ietf helper disable**
- B. **nsf cisco helper disable**
- C. **nsf ietf helper strict-lsa-checking**
- D. **nsf cisco enforce global**

Correct Answer: A

Section: Networking

Explanation

Explanation/Reference:

Reference: https://www.cisco.com/c/en/us/td/docs/ios/12_4t/ip_route/configuration/guide/tgrhelp.html

QUESTION 29

```
R1:
interface FastEthernet0/0
ip address 10.1.12.1 255.255.255.0
duplex full
end
!
!
!
R1(config)#interface FastEthernet0/0
R1(config-if)#ospfv3 1 area 1 ipv4
% IPv6 routing not enabled
```

Refer to the exhibit. A network engineer is implementing an OSPF configuration. Based on the output, which statement is true?

- A. OSPFv3 does not run for IPv4 on FastEthernet0/0 until IPv6 routing is enabled on the router and IPv6 is enabled on interface FastEthernet0/0.
- B. In the **ospfv3 1 area 1 ipv4** command, area 0 must be configured instead of area 1.
- C. OSPFv3 cannot be configured for IPv4; OSPFv3 works only for IPv6.
- D. "IPv6 routing not enabled" is just an informational message and OSPFv3 runs for IPv4 on interface FastEthernet0/0 anyway.

Correct Answer: C

Section: Networking

Explanation

Explanation/Reference:

VCEup

QUESTION 30

```
R1
router bgp 65000
router-id 192.168.1.1
neighbor 192.168.1.2 remote-as 65012
neighbor 192.168.1.2 local-as 65112
```

Refer to the exhibit. A network engineer is implementing a BGP protocol. Which effect of the local-as keyword in this configuration is true?

- A. It enables peer 192.168.1.2 to establish a BGP relationship with R1 using AS 65012 without additional configuration.
- B. It enables peer 192.168.1.2 to establish a BGP relationship with R1 using AS 65112 and the VPNv4 address family.
- C. It enables peer 192.168.1.2 to establish a BGP relationship with R1 using AS 65012 and the VPNv4 address family.
- D. It enables peer 192.168.1.2 to establish a BGP relationship with R1 using AS 65112 without additional configuration.

Correct Answer: D

Section: Networking

Explanation

Explanation/Reference:

QUESTION 31

```

RP/0/0/CPU0:router# show bgp neighbors 192.168.2.2

BGP neighbor is 192.168.2.2, remote AS 1, local AS 140, external link
  Remote router ID 0.0.0.0
    BGP state = Idle
    Last read 00:00:00, hold time is 180, keepalive interval is 60 seconds
    Received 0 messages, 0 notifications, 0 in queue
    Sent 0 messages, 0 notifications, 0 in queue
    Minimum time between advertisement runs is 15 seconds

  For Address Family: IPv4 Unicast
    BGP neighbor version 0
    Update group: 0.1
    eBGP neighbor with inbound or outbound policy; defaults to 'drop'
    Route refresh request: received 0, sent 0
    0 accepted prefixes
    Prefix advertised 0, suppressed 0, withdrawn 0, maximum limit 524288
    Threshold for warning message 75%

  Connections established 0; dropped 0
  Last reset 00:02:03, due to BGP neighbor initialized
  External BGP neighbor not directly connected.

```

Refer to the exhibit. Based on the show command output, which result is true after BGP session is established?

- A. The IOS XR router advertises and accepts all routes to and from eBGP neighbor 192.168.2.2.
- B. The IOS XR router advertises all routes to the neighbor 192.168.2.2, but it does not accept any routes from 192.168.2.2.
- C. No routes are accepted from the neighbor 192.168.2.2, nor are any routes advertised to it.
- D. The IOS XR router does not advertise any routes to the neighbor 192.168.2.2, but it accepts any routes from 192.168.2.2.

Correct Answer: C

QUESTION 32

```

R1
router isis
 net 49.0012.1111.1111.1111.00
 is-type level-1
 area-password cisco
R2
router isis
 net 49.0022.1111.1111.1112.00
 is-type level-1-2
 area-password cisco

```

Refer to the exhibit Which effect of this configuration is true?

- A. The two routers fail to form a neighbor relationship because they have different IS-IS area types.
- B. The two routers successfully form a neighbor relationship.
- C. The two routers fail to form a neighbor relationship because the authentication configuration is missing.
- D. The two routers fail to form a neighbor relationship because their system IDs are different.

Correct Answer: B

Explanation/Reference:

QUESTION 39

```
R1
interface fastethernet1/0
 ip address 192.168.2.14 255.255.255.0
 ip ospf message-digest-key 1 md5 cisco
 ip ospf authentication message-digest
```

Refer to the exhibit. Which condition must be met by the OSPF peer of router R1 before the two devices can establish communication?

- A. The OSPF peer must use clear-text authentication.
- B. The OSPF peer must be configured as an OSPF stub router.
- C. The interface on the OSPF peer may have a different key ID, but it must use the same key value as the configured interface.
- D. The interface on the OSPF peer must use the same key ID and key value as the configured interface.

QUESTION 41

```
router bgp 1
 network 192.168.1.2 mask 255.255.255.255
 neighbor 192.168.1.1 remote-as 64512
 neighbor 192.168.1.1 update-source Loopback0
 neighbor 192.168.1.1 send-label
```

Refer to the exhibit. Which statement about the neighbor statements for 192.168.1.1 is true?

- A. The router sends BGP labels for its prefixes to this peer.
- B. The router must have TDP configured for the send-label command to operate.
- C. The neighbor router receives at least four labels from this router.
- D. The router sends only a label for the prefix for Loopback0.

Correct Answer: A

Section: Networking

Explanation

Explanation/Reference:

QUESTION 42

```
R1
router isis
  net 52.0011.0000.0000.0001.00
  is-type level-2

interface gigabitethernet0/1
  ip address 192.168.0.1 255.255.255.0
  ip router isis

R2
router isis
  net 52.0022.0000.0000.0002.00
  is-type level-1

interface gigabitethernet0/1
  ip address 192.168.0.2 255.255.255.0
  ip router isis
```

Refer to the exhibit. Which statement about the status of the neighbor relationship between R1 and R2 is true?

- A. The neighbor relationship is down because the two routers are configured with different area types.
- B. The neighbor relationship is down because the two routers are in the same subnet.
- C. The neighbor relationship is up because R2 is level 1 and level 2 router.
- D. The neighbor relationship is down because R2 is operating as a Level 1 router and the two routers are in different areas.

Correct Answer: A

Section: Networking

Explanation/Reference:

QUESTION 43

<pre> PE-A ! interface FastEthernet0/0 ip address 10.10.10.1 255.255.255.252 ip ospf authentication null ip ospf 1 area 0 duplex full end ! router ospf 1 log-adjacency-changes passive-interface Loopback0 network 10.10.10.0 0.0.0.3 area 0 default-metric 200 ! </pre>	<pre> PE-B ! interface FastEthernet0/0 ip address 10.10.10.2 255.255.255.252 ip ospf authentication null ip mtu 1400 ip ospf 1 area 0 duplex half end ! R1#sho run b router ospf router ospf 1 log-adjacency-changes passive-interface Loopback10 network 10.10.10.0 0.0.0.255 area 0 default-metric 100 </pre>
--	---

Refer to the exhibit. Which configuration prevents the OSPF neighbor from establishing?

- A. default-metric
- B. duplex
- C. network statement
- D. mtu

Correct Answer: D

Section: Networking

Explanation

Explanation/Reference:

QUESTION 44

```

R1:
!
interface FastEthernet0/0
 ip address 10.1.12.1 255.255.255.0
 duplex full
!
router ospf 1
 network 0.0.0.0 255.255.255.255 area 0
R2:
!
interface FastEthernet0/0
 ip address 10.1.12.2 255.255.255.252
 duplex full
!
router ospf 1
 network 0.0.0.0 255.255.255.255 area 0

```

Refer to the exhibit. R1 and R2 are directly connected with Fast Ethernet interfaces and have the above configuration applied OSPF adjacency is not formed. When the **debug ip ospf hello** command is issued on R1, these log messages are seen:

```
*Mar 6 21:57:33.051: OSPF-1 HELLO Fa0/0: Mismatched hello parameters from 10.1.12.2
*Mar 6 21:57:33.051: OSPF-1 HELLO Fa0/0: Dead R 40 C 40, Hello R 10 C 10 Mask R
255.255.255.252 C 255.255.255.0
```

Which command can be configured on routers R1 and R2 on f0/0 interfaces to form OSPF adjacency?

- A. **ip ospf network point-to-multipoint non-broadcast**
- B. **ip ospf network non-broadcast**
- C. **ip ospf network broadcast**
- D. **ip ospf network point-to-point**

Correct Answer: D

QUESTION 47

```
R1
interface fastethernet1/0
 ip address 192.168.1.3 255.255.255.0
router bgp 65000
 router-id 192.168.1.1
 neighbor 192.168.1.2 remote-as 65012

R2
interface fastethernet1/0
 ip address 192.168.1.2 255.255.255.0
router bgp 65012
 router-id 192.168.1.1
 neighbor 192.168.1.3 remote-as 65000
 neighbor 192.168.1.3 local-as 65112
```

Refer to the exhibit. Assume all other configurations are correct and the network is otherwise operating normally.

Which conclusion can you draw about the neighbor relationship between routers R1 and R2?

- A. The neighbor relationship is up.
- B. The neighbor relationship will be up only if the two devices have activated the correct neighbor relationships under the IPv4 address family.
- C. The neighbor is down because the **local-as** value for R2 is missing in the R1 **neighbor** statement.
- D. The neighbor relationship is down because R1 believes R2 is in AS 65012.

Correct Answer: D
Section: Networking
Explanation

Refer to the exhibit. Which statement about this configuration is true?

- A. It requires a dynamic Cisco MPLS TE path to be configured for the tunnel to run.
- B. It requires OSPF to also be running to have optimized Cisco MPLS TE tunnels.
- C. It is the configuration for the head-end router of a Cisco MPLS TE tunnel with segment routing.
- D. It requires an explicit Cisco MPLS TE path to be configured for the tunnel to run.

Correct Answer: C

Section: MPLS and Segment Routing Explanation

QUESTION 71 Which statement about segment routing prefix segments is true?

- A. It is the longest path to a node.
- B. It is linked to an adjacency SID that is globally unique within the router.
- C. It is linked to a prefix SID that is globally unique within segment routing domain.
- D. It requires using EIGRP to operate.

Correct Answer: C

Section: MPLS and Segment Routing Explanation

Explanation/Reference:

Reference: https://www.cisco.com/c/en/us/td/docs/routers/asr9000/software/segment-routing/configuration/guide/b-seg-routing-cg-asr9k/b-seg-routing-cg-asr9k_chapter_010.pdf

QUESTION 72

```

RP/0/RSP0/CPU0:JFK-PE#show mpls ldp bindings 192.168.10.10/32
Fri Nov 11 21:02:33.124 UTC
192.168.10.10/32, rev 2
  Local bindings: label: ImpNull
  Remote bindings: (2 peers)
    Peer          Label
    -----
    10.10.10.2:0   562656
    10.10.10.5:0   378337

```

Refer to the exhibit. After implementing a new design for the network, a technician reviews the pictures CLI output as part of the MOP.

Which two elements describe what the technician can ascertain from the ImpNull output? (Choose two.)

- A. Ultimate Hop Popping is in use for the prefix displayed.
- B. Penultimate Hop Popping is in use for the prefix displayed.
- C. Label 0 is used for the prefix displayed, but will not be part of the MPLS label stack for packets destined for 192.168.10.10.
- D. Label 3 is in use for the prefix displayed and will be part of the MPLS label stack for packets destined for 192.168.10.10.
- E. Label 0 is used for the prefix displayed and will be part of the MPLS label stack for packets destined for 192.168.10.10.

Correct Answer: BE

Section: MPLS and Segment Routing Explanation

QUESTION 73 A router RP is configured to perform MPLS LDP graceful restart.

Which three steps are included when the RP sends an LDP initialization message to a neighbor to establish an LDP session? (Choose three.)

- A. Learn from Neighbor (N) flag, set to 1
- B. Recovery Time field
- C. Type-9 LSA
- D. Reconnect Timeout field
- E. Graceful restart capability in OPEN message
- F. Learn from Network (L) flag, set to 1

Correct Answer: BDF

QUESTION 74

```

class-map WEB
  match protocol http

```

Refer to the exhibit. Which statement describes the effect of this configuration?

- A. It matches HTTP traffic for use in a policy map.
- B. It applies a service policy to all interfaces remarking HTTP traffic.

- C. It creates an ACL named WEB that filters HTTP traffic.
- D. It modifies the default policy map to allow all HTTP traffic through the router.

Correct Answer: A

QUESTION 75

A regional MPLS VPN provider operates in two regions and wants to provide MPLS L3VPN service for a customer with two sites in these separate locations. The VPN provider approaches another organization to provide backbone carrier services so that the provider can connect to these two locations.

Which statement about this scenario is true?

- A. When edge routers at different regional sites are connected over the global carrier backbone, MP-eBGP must run between the routers to exchange the customer VPNv4 routes.
- B. When eBGP is used for label exchange using the send-label option, MPLS-BGP forwarding is configured under the global ABC CSC PE-to-CE interface.
- C. When BGP is used for both route and label exchange, the **neighbor a.b.c.d send-label** command is used under the address-family VPNv4 command mode.
- D. When IGP is used for route exchange and LDP for label exchange, MPLS is enabled only on the VRF interface on the backbone-carrier PE side.

Correct Answer: B

QUESTION 76

```
route-policy ciscotest
  if destination in acl10 then
    pass
  else
    set local-preference 300
  endif
end-policy end
```

Refer to the exhibit. A network engineer is implementing a BGP routing policy. Which effect of this configuration is true?

- A. All traffic that matches acl10 is allowed without any change to its local-preference.
- B. All traffic that matches acl10 is dropped without any change to its local-preference.
- C. If traffic matches acl10, it is allowed and its local-preference is set to 300.
- D. All traffic is assigned a local-preference of 300 regardless of its destination.

Correct Answer: A

QUESTION 77

```
class-map match-any class1
match-protocol ipv4
match qos-group 4
```

Refer to the exhibit. A network engineer is implementing QoS services. Which two statements about the qos-group keyword on Cisco IOS XR are true? (Choose two.)

- A. It marks packets for end-to-end QoS policy enforcement across the network.
- B. QoS group marking occurs on the ingress.
- C. The QoS group numbering corresponds to priority level.
- D. QoS group can be used in fabric QoS policy as match criteria.
- E. It cannot be used with priority traffic class.

Correct Answer: BD

QUESTION 78

Refer to the exhibit. If router A is the RP, which PIM mode can you configure so that devices will send multicast traffic toward the RP?

- A. PIM-SM
- B. BIDIR-PIM
- C. PIM-SSM
- D. PIM-DM

Correct Answer: A

Section: Services

Explanation

Explanation/Reference:

QUESTION 79

```

route-policy qppb-as6000
if as-path in (ios-regex '61100, 61200, 61300') then
set qos-group 10

router bgp 100 bgp
table-policy qppb-as6000

```

Refer to the exhibit. Which statement supports QPPB implementation?

- A. QPPB policies affect only egress traffic.
- B. QoS policies rely exclusively on BGP attributes to manipulate traffic.
- C. QoS policies are identified in the MPLS forwarding table.
- D. QoS policies use BGP to gain full coverage on the network.

Correct Answer: D

Section: Services

Explanation

Explanation/Reference:

QUESTION 80 Why do packet loops occur during the configuration of BIDIR-PIM?

- A. The network does not support BIDIR-PIM.
- B. The network is partially upgraded to support BIDIR-PIM.
- C. The router has not been configured to advertise itself.
- D. No interface for carrying traffic for multicast groups has been configured.

Correct Answer: B

QUESTION 86

```
ip flow-export source loopback 0
ip-flow-export destination 192.168.1.1
ip-flow-export version 9 origin-as
```

Refer to the exhibit. Export statistics received do not include the BGP next hop.

Which statement about the NetFlow export statistics is true?

- A. Loopback 0 must be participating in BGP for it to be included in the export statistics.
- B. To include the BGP next hop in the export statistics, those keywords must be included with the version 9 entry.
- C. The origin AS and the peer-as will be included in the export statistics.
- D. Only the origin AS of the source router will be included in the export statistics.

Correct Answer: B

QUESTION 87

```
snmp-server community ciscotest ro 2
```

Refer to the exhibit. What is significant about the number 2 in the configuration?

- A. It indicates two SNMP managers can read and write with the agent using community string ciscotest.
- B. It dictates the number of sessions that can be open with the SNMP manager.
- C. It is the numeric name of the ACL that contains the list of SNMP managers with access to the agent.
- D. It represents the version of SNMP running.

QUESTION 101

Router 1:

```
netconf-yang
netconf-yang feature candidate-datastore
```

Refer to the exhibit. Which statement describes this configuration?

- A. Router 1 has a new data store to collect SNMP information, but configuration must still be done at the CLI only.
- B. Router 1 can be remotely managed by the CLI using Telnet.
- C. Router 1 has its running configuration locked so changes can be made only when the administrator issues a kill session.
- D. Router 1 has a temporary data store where a copy of the running configuration can be manipulated and verified before committing the configuration.

Correct Answer: D
Section: Automation and Assurance
Explanation

Explanation/Reference:

Reference: https://www.cisco.com/c/en/us/td/docs/ios-xml/ios/prog/configuration/169/b_169_programmability_cg/configuring_yang_datamodel.html

QUESTION 102

```
telemetry model-driven
sensor-group cisco
sensor-path Cisco-IOS-XR-infra-statsd-oper:infra-statistics/interfaces/interface/latest/generic-counters
commit
```

Refer to the exhibit. This configuration is being applied on an IOS XR route.

Which statement about this configuration is true?

- A. It is used to create a sensor-group and has a list of YANG models for streaming.

- B. It is used to create a subscription to specify the streaming interval.
- C. It is used to identify MIB entries and has a list of YANG models.
- D. It is used to identify traps for SNMP polling.
